

Data Specs

608ZZ Metal Shielded Miniature Bearing

Miniature bearings are sometimes referred to as instrument bearings or micro bearings. The purpose of a ball bearing is to reduce rotational friction and support radial and axial loads. It achieves this by using at least two races to contain the balls and transmit the loads through the balls. In most applications, one race is stationary and the other is attached to the rotating assembly (e.g., a hub or shaft). As one of the bearing races rotates it causes the balls to rotate as well. We provide metric sizes for applications as varied as gyros, anemometers, miniature gearboxes, small motors and radio controlled models. Our metric miniature ball bearings are supplied in chrome steel and can withstand heavy radial loads and moderate thrust loads in both directions.

SKU: 1008

Brief Data:

- Bore Diameter: Ø8mm.
- Outer Diameter: Ø22mm.
- Width: 7mm.
- Construction: Single row deep groove ball bearings.
- Material (rings & balls): Chrome Steel.
- Material (cage): Pressed Steel.
- Shielding: Double Metal Shield.

Application:

- 3D Printer
- DIY CNC Machine & Robotics
- Linear Motion
- Skateboard

Mechanical Dimension:

Unit: mm.

Material (rings & balls)	SAE52100 chrome steel
Material (cage)	pressed steel
Closures	Metal shields
Load rating (stat)	136 Kgf
Load rating (dyn)	327 Kgf
Speed Limit *	34,000 rpm
Standard Lubrication **	Kyodo Yushi Multemp SRL grease

* with adequate lubrication

** may vary

The Face behind our product quality...

In a world of constant change and continuous technological development, a new or replacement product is never far away – and they all need to be tested.

Many vendors simply import and sell without checks and this cannot be the ultimate interests of anyone, particularly the customer. Every part sold on Handsontec is fully tested. So when buying from Handsontec products range, you can be confident you're getting outstanding quality and value.

We keep adding the new parts so that you can get rolling on your next project.
