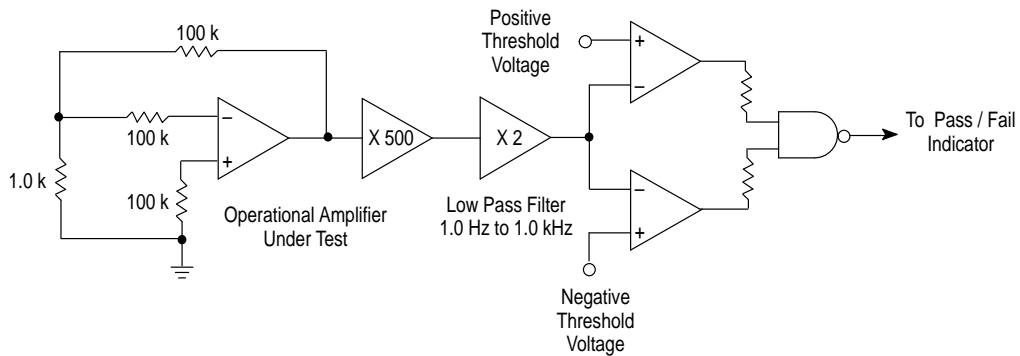

**Figure 3. Output Noise versus Source Resistance**

**Figure 4. Spectral Noise Density**

**Figure 5. Burst Noise Test Circuit**

Unlike conventional peak reading or RMS meters, this system was especially designed to provide the quick response time essential to burst (popcorn) noise testing.

The test time employed is 10 sec and the 20  $\mu$ V peak limit refers to the operational amplifier input thus eliminating errors in the closed loop gain factor of the operational amplifier.
